We ask you for the checking and acceptance of the positioning of the layout and types, correctnesses of texts, bar codes, the positioning of the varnish layout the positioning of the cutout in the varnish the positioning of the layout on the cutting form drawing, and the colouring of the project. Your confirmation and decision of correctness will be taken as binding for the production of the final design. I confirm and agree with production.

Please notice that the proof is just the simulation of the printing process. The Pantone colours of the printed project will be the same as in the approved Pantone book - in the proof they are simulated from the CMYK colours. Attention! The bitmap files converted into the pdf file (for the remote acceptance) have automatically worse quality. It does not influence the printing quality. The small "L" letter looks like "bolded" in pdf filr - it is just a display mistake.
